INTRODUCTION

"Vision (the Mind's Eye), Its Quality Lies with the Beholder."

This author believes that visionary concepts should create equations and formulas and not the reverse. An author's capacity to communicate will override his lack of visionary ability and influence the end product.

2600 years ago, the Greek philosopher Thales, believed that there was a primary matter. This matter, if modified in various ways, compromised all the things we see around us as well as our own physical bodies. This quote referred to water on Earth. The concept of primary matter is a perfect analogy to the positively charged particles (PCP's) in our universe.

This text is being prepared for the sole purpose of sharing the beautiful manner in which positively charged particles (PCP's) intersecting at 10^{-18} cm and pulsating at 2×10^{-18} per second make our universe work. They create a unified field of forces, with the energy being provided by nuclear furnaces (our suns) which transport and recycle all known energy.

There will never be a time in space when this species, which evolved physically and formulated their ideas from their contact with this planet Earth, has the capacity to identify the outer limits of the Universe. Nor will there be a time, this species develops the technical capabilities to identify the size of a PCP.

The assumption that there is a beginning and an end to our universe and that God always was and always will be limited the opportunity for man to understand his universe.

What Happened to the Visionaries of Our Universe?

Visionaries B.C.

The Greek philosopher Thales of Mitelus, 600 B.C., made the first reference to primary matter.

The Greek philosopher Democritus, 460 - 357 B.C., suggested that matter was composed of very small indivisible bits. These combinations of atoms (meaning indivisible in Greek) make up all the varying substances of the world.

The Greek Philosopher Aristotle, 384 - 322 B.C., believed that all motion requires an agency to produce it. An example, a bow string is drawn taut and held until released putting the arrow into flight. The flight of the arrow is accurately sustained by the feathers creating a vortex of air around it.

The Book of Genesis

600 - 300 B.C., scribes, from an early sect of Hebrews, created their first written language. Within this process, the Book of Genesis was created as part of the Pentateuch, the Jewish instructional law. In the Book of Genesis, it is written that Moses presented to his people the Ten Commandments written in stone. (Moses 1300 - 1200 B.C.) In what language were these tablets written one thousand years prior to the writing of the Book of Genesis? That, written on the tablets, is accepted as God's Word in the Torah, the Koran and the Bible.

Theologians are known for their direct communication with God and, therefore, are not held accountable for their lack of authenticity.

This format creates an attitude among men not to question the written Word. Fear of not being accepted within a society causes blind faith and eliminates the potential for visionaries.

Roman Empire

On or about 415 A.D., the Roman Empire gave way to the marauding civilian populace. This populace destroyed the Alexandria Library which housed an accumulation of scrolls representing man's best effort to understand logic and physics. This was the final demise of great philosophers' and visionaries' contributions to the world.

Within the Darkness 450 A.D. - 1250 A.D.

The lack of control by the Roman Empire allowed Muhammad, (570 - 630 A.D.), to engulf and control the southern portion of Europe up to and including Spain. With this great military conquest he created and spread his own religion. The Koran was formulated by taking ideas from both Judaism and pre-Catholicism. These early scripts were created by writers formulating the early Arabic written language. Once again, this makes the printed word (Allah's Word) all powerful, thought controlling and establishes blind faith.

Christianity came out of Greece about 300 A.D. settling in the catacombs around Rome. Religious men (Monks), 400 - 700 A.D., pilfered the Roman Temples while the bishops attempted to convert the temples to churches. Bishops, politically incensed, gathered power for the controversial position of supreme bishop now known as the Pope.

800 - 1200 A.D. Bishops and Monks, recounting so called religious events on script, created the New Testament. They controlled the parishioners by using Latin as the language of the faith among a populace of different languages and dialects. They represented their word as God's word. This created a blind faith sacrificing abstract thought. One of the most revealing episodes of a society controlled by Bishops was the formation of the Children Crusades from 1100 - 1200 A.D. This period produced 800 years without visionaries and would be appropriately referred to as the Dark Ages.

Reformation

Martin Luther 1483 - 1546 A.D., as a religious leader, took advantage of the printing press, enabling him to spread his propaganda concerning reformation. This era gave new power to the printed word by mass producing the Bible and creating the Protestant religion (the Gospel Truth).

Visionaries A.D.

Leonardo da Vinci 1452 - 1519 A.D., he possessed some of the greatest inventive talents known to man. This great visionary was stigmatized by the religious environment from the earlier dogma of the Dark Ages. Without his artistic talents, in the creation of The Mona Lisa and Scenes of the Last Supper, his great visionary ability would have been lost to mankind. Skirting the religious and political repression of the time, da Vinci entered into the field of Science which was looked on as blasphemy.

He developed scientific theories about sunlight reflecting on the moon, water moving sediment in the sea, and mechanical apparatuses such as the helicopter, machine gun, bicycle and parachute.

Nicolaus Copernicus 1473 - 1543 A.D., a mathematician and Church Cleric who sought to put the heavens in order. His main interest was to simplify the Ptolemaic system Catholicism considered sacred. His intentions were not to abandon the idea of God behind the Universe, but to create more symmetry than existed in the Ptolemaic system. For these efforts, he was reprimanded by the Church.

Galileo 1564 - 1642 A.D., while developing the telescope, realized that the Earth rotated on its axis and orbited the Sun. This new discovery did not coincide with the Church's Ptolemaic view of the Universe. Catholicism controlled man's search for the truth and made the involvement with science a sin. Galileo was excommunicated from his Church when presenting the facts of his scientific undertaking to the religious world of Catholicism. Galileo, however, envisioned God interacting with the Universe in all his endeavors regarding scientific discovery.

Sir Isaac Newton 1642 - 1727 A.D., theorized gravity as an inner force of mass holding the planets within their orbit.

Albert Einstein 1879 - 1955 A.D., awarded the Nobel Prize in 1921 for his explanation of the photoelectric effect. Philipp Lenard received the 1905 Nobel Prize for its discovery.

The Great Visionaries Isaac Newton and Albert Einstein Lead
Scientific Community Astray in Physics and Quantum Physics.

Isaac Newton with the "Apple Effect" identified gravity as an inner force. Albert Einstein's method of manufacturing formulas randomly led to $E=MC^2$. Einstein squared the speed of a light frequency relative to mass. He multiplied two large numbers $186,000 \times 186,000$ using the results relative to mass. Einstein never demonstrated how the spectrum of light frequencies travel. Nor did he present any evidence as to how a light frequency created a force within an atom of mass.

The assumptions of Isaac Newton and Albert Einstein led to the magnetic and gravitational fields being created by an unidentifiable inner force. This inner force is without proper continuity to counter centrifugal force caused by the Earth rotating on its axis. Now, because of a few waves on a pond and Einstein's General Theory of Relativity, a fabric is invoked that creates an orbit for the Earth which warps time and space. Three problems created: the Universe refuses to be warped, recognizes no man's time; and this invoked fabric would cause our planets to rotate in the opposite direction as the Earth actually turns today.

The Great Visionaries of today created the Universe at "Planck time", 10^{-43} seconds, 15 billion years ago with a 10^{-23} centimeter Super Atom. Gravity was the first force to escape this constantly cooling and expanding Universe. The Black Holes form and expansion stops causing the contraction of our Universe into Nothingness.

"The Mind Produces Great Visionary Ability When It Eliminates the Impossible. Whatever Remains, No Matter How Incredible It Sounds, Is the Truth."

Anthropology, The Search for our Species' Origins

This search caused great controversy in religious circles. The assumption, that man had a large brain before he stood up to take on his world, by scientists, hampered the understanding of man's evolution. The recent discovery of knee bones that could lock defined the beginnings of Homo erectus. The ability to stand upright presented our ancestors the opportunity to be hunters and gatherers. The advantage of viewing the world from this different perspective added the necessary stress to develop the larger brain we have today known as Homo sapiens.

Science reflects little understanding of the true nature of space.

Cosmology and Suns of the Universe

Scientists in this field are searching for time relative to space. Their focus is primarily on a beginning, expansion, Black Holes and contraction. This leaves no time for the important endeavor to understand how our suns function to keep this cosmos alive with energy.

Gravity, the most important force in the Universe, is being completely overlooked. It looks as if the science of space has been turned into a search for creation. Scientists, making up their mind in regards to what they will find before they actually look, will certainly find what they are looking for, such as Theologians when looking for God.

"Science Reflects Little Understanding of the True Nature of Mass."

Quantum Science and the Atoms of Elements

Atoms were recognized as the smallest and the most significant part of matter for hundreds of years. The scientific community's interest should be to understand how an atom functions within itself and contributes to the element structure.

Scientists have designated themselves as a demolition crew. They use an accelerator as a cannon making small meaningless particles. This wrecking process takes place solely to name and claim parts of an atom for a scientific award. These particles are very difficult to reproduce authentically with any significant accomplishment. Particles produced by accelerators decay early and some are never seen. What has been the advancement in science by producing these so called particles?

Hadrons = Baryons (3 Quarks) and Mesons (2 Quarks (Pions)).

Leptons = Positrons, Neutrinos, Muons and Tau Particles.

Beauty (Bottom) = one of the 6 types or flavors of Quarks.

Charm = one of the 6 types or flavors of Quarks.

Color Force = is carried by Gluons to hold Quarks together.

These great discoveries, particles seen for only a fraction of a second, have no value. The understanding of early decay would contribute to the advancement of science. Early decay caused by structural inadequacy should indicate that an unseen force is at work.

The scientists of today believe the answer is in a larger cannon.

Physics - The Science of the Natural & Common Forces of Nature

Using basic knowledge regarding the natural forces of nature, the ultimate unification exists. The positive entity in space is the intersecting PCP's creating a spatial circuitry. In mass, the intersection of PCP's activate every atom and play the intrinsic role in producing all energy in a Unified Universe.

Jacobs' Positively Charged Particles (PCP's)

Electrons in Mass (EM)

The positive entity that, when intersecting at 2×10^{-18} per second, creates all negative energy in our universe.)

Jacobs' Continuity (A Unified Universe Field Theory)

PCP's create the positive and negative entity unifying Universe.

Energy Relative to Space & Mass ($E=EMPCP's^1$) = Chemical Explosion
(PCP's, exiting, contact electrons of neighboring atoms.)

Energy Relative to Space & Mass ($E=EMPCP's^{1.5}$) = Fission

(PCP's, exiting, make contact with electrons of same atom.)

Energy Relative to Space & Mass ($E=EMPCP's^2$) = Fusion

(PCP's, entering, induct electrons in nucleus of same atom.)

Jacobs' Grid of Intersecting PCP's (GIPCP's)

This grid consists of a PCP's intersection at 10^{-18} cm and pulsating at 2×10^{-18} per second in mass and space. In mass, the impact point, the nucleus of the atom, forces out surrounding electrons. In space, the intersecting PCP's are the positive force creating a negative sub-electrical repelling wave.

All electromagnetic energy and frequencies inducted on grid are repelled at 300,000kms

PCP's - the Nature of our Universe that Creates a Positive & Negative Entity
(Creating Spatial Circuitry) & (Activating Every Atom in Mass)

- 1) PCP's the prime essence of the Universe, a positive entity.
- 2) PCP's are hypothetically 10^{-100} cm.
- 3) PCP's travel at 300,000kms.
- 4) PCP's meet at 2×10^{-18} per second in space and mass creating an intersection every 10^{-18} cm producing the GIPCP's.
- 5) The PCP's intersection in mass create the nucleus of every atom.
- 6) The impact of PCP's create the frequency that bind the atoms together.
- 7) PCP's, upon entrance, force out a negative charge(s), Electron(s) from the nucleus, according to the substance of the atom(s).
- 8) PCP's, upon exiting the nucleus, leave a positive charge(s), Proton(s), according to the substance of the atom(s).
- 9) The electron is repelled away from the nucleus, within its orbit, relative to every repeating intersecting PCP's at 2×10^{-18} per second.
- 10) Electrons circulating within the atom repel the electrons of adjacent atoms.
- 11) The amount of electrons being produced is a direct result of the type of substance within the atom.
- 12) The electrons are replaced, immediately upon escape, by the next intersecting PCP's at $(2 \times 10^{-18}$ per second).

- 13) Elements with unstable frequencies have a rapid loss and replacement of electrons. This loss creates a sub-electrical current in the element. The exiting point is positive. The re-entry point is negative. The negative frequency repelled around the element is the magnetic field. The element is the magnet.
- 14) An electrical current, flowing through a wire, causing the loss and replacement of the electrons of the wire creates the surrounding magnetic field.
- 15) PCP's intersect in space at 10^{-18} cm, pulsate at 2×10^{-18} per second, creating a sub-electrical negative wave.
- 16) All electromagnetic energy created is immediately inducted on the GIPCP's.
- 17) Electromagnetic energy such as light and radio frequencies, inducted on the GIPCP's negative repelling wave, is transported at 300,000kms.
- 18) $E = \text{EMPCP's}^{1.5}$ (fission) energy being expressed when an electromagnetic frequency interrupts the atomic frequency of an atom. This frequency triggers the electrons into the path of exiting PCP's as expressed in an atomic bomb.
- 19) $E = \text{EMPCP's}^2$ (fusion) the result of electrons being trapped into the nucleus of an atom by incoming PCP's. This energy is expressed in a hydrogen bomb or the nuclear furnaces of our suns. Electromagnetic energy initiates a rapid movement of electrons putting them in the path of incoming PCP's which triggers fusion.

Positive Entities of our Universe - Gravitational & Magnetic Fields

- 20) All mass has positive interiors with a negative electron repelling wave surrounding it. The nuclear fusion in our suns create the greatest magnetic and gravitational fields of energy. These fields are a result of very large numbers of electrons lost and replaced because of the nuclear fusion.
- 21) The magnetic field surrounding mass is caused when the electrons take a direct exit relative to the rotating axis. This exit causes a sub-electrical current within the mass. Their exiting point creates the positive referred to as the North Pole. A negative repelling wave is created that encompasses the mass and enters on the opposite end completing the circuit. This negative end is referred to as the South Pole, and the encompassing negative wave is detected as a magnetic field.
- 22) Gravity is the real expression of the positive entity in the universe. Large areas of mass have strong positive inner cores with an encompassing field of negatively charged electrons. Mass having a negative exterior with positive interiors create an attraction/repulsion scenario. Whereas, the negative of one mass is attracted to the positive of the neighboring mass and vice versa. This situation causes the smaller mass to orbit a larger mass. This compels it to rotate on its axis toward the larger mass relative to its orbital direction.

- 23) PCP's entering a mass from any and all directions, create a nucleus for each and every atom within mass. The resistance of the substance to the PCP's creates the atom's frequency. The exiting of the PCP's maintain the appropriate number and orbits of electrons relative to that element. This contact with PCP's creates all forces relative to weight and pressure in mass.
- 24) No electromagnetic energy can originate without a positive initiation and a negative repulsion by man or nature.
- 25) Lightning, in nature, is an expression of a positive entity in our atmosphere. This energy is a result of Hydrogen electron losses because of their inability to completely connect with oxygen atoms. The accumulation of negative electrons increases until positive attraction by the PCP's intersection creates ignition. The electromagnetic energy created by this ignition is known as lightning.
- 26) All electromagnetic energy known as: electricity traveling through wires, telephone, radio and television frequencies are transported by a sub-electrical negative repelling wave on the GIPCP's.
- 27) The hydroelectric dams and nuclear plants, that turn large turbine generators, would be of no use if it were not for a constant replacement of electrons in their armatures by PCP's.

28) Suns are like nuclear furnaces that create the fusion
($E=EMPCP's^2$) to accelerate PCP's. This acceleration
of PCP's creates the energy necessary to maintain space
with PCP's traveling at a constant 300,000kms per second
creating the Jacobs' GIPCP's.

29) PCP's, leaving these nuclear furnaces deep within
the suns, carry large unknown amounts of electromagnetic
energy. This electromagnetic energy is shed immediately
creating strong magnetic and gravitational fields.

30) Suns (nuclear furnaces) produce the energy to accelerate
PCP's to higher velocities than the operating GIPCP's.
This additional velocity is undetectable as it produces
the energy replenishment to the GIPCP's.

This maintains the operation at 300,000kms per second.

PCP's are like rivers flowing into seas maintaining sea
level. Rivers are the connection in recycling the water to the
seas. PCP's furnish space with the energy necessary to
maintain the GIPCP's. They are the connection in the recycling
process initiated by our suns.

The Jacobs' Unified Universe Field Theory is a recycling
process with three undeniable properties:

- 1) Suns (nuclear furnaces) produce and recycle all energy
and provide the acceleration for PCP's.
- 2) PCP's distribute energy to all areas of mass and space.
- 3) PCP's are the energy nature created to produce and
maintain a positive and negative charge in the atom.

2600 Years of Scientific of Questions Classified as Phenomena
Answers based on Jacob's Unified Universe Field Theory.

(The what, how and whys left unanswered by Cosmology.)

- 1) How does gravity work in our Universe and on our planet?

(Einstein identifies this entity of nature as a fabric which warps time and space. This fabric would cause the planets of our universe to rotate the opposite direction.)

Mass has a constant loss of negative electrons which encompass such mass. The continuous replacement of these negative electrons by PCP's create a strong positive field within that mass. The strong positive fields within mass are attracted to the negative electrons encompassing opposing mass and vice versa.

- 2) Why do electromagnetic frequencies travel at the same speed regardless of energy induced?

(Scientists have been unable to recognize this catalytic feature of nature, evidently believing frequencies travel relative to the energy introduced.)

Electromagnetic frequencies ride on a negative repelling wave identified by Jacobs' Grid of Intersecting PCP's.

- 3) How does the speed of light squared create a force in mass?

The light frequency does not create a force in mass. It only identifies the speed of the intersecting PCP's which create the force in mass.

- 4) How can time and light warp space?

Time is irrelevant to the Universe and light only reflects.

Answers based on Jacob's Unified Universe Field Theory.

(The what, how and whys left unanswered by Quantum Physics.)

- 1) What is a nuclear binding force within an atom?

(Scientists have long been searching for such an entity. This search was initiated based on $E=MC^2$. Einstein squares a light frequency initiating a search with large accelerators that only identified early decay of atoms.) The atom's nucleus is formed by intersecting PCP's which force out electrons, replace electrons, and repel electrons. The energy in the atom is produced by intersecting PCP's.

- 2) How does an atom get positively and negatively charged?

(This key to the true nature of energy is overlooked.)

The PCP intersection = positive charge (proton).

Repelled force = negative charge (electrons).

- 3) What is electricity?

(Scientists classify this energy as a phenomenon.)

Electricity is the energy, identified as a current, produced by the constant replacement of electrons by the PCP's intersecting at 2×10^{-18} per second.

- 4) How do some elements produce magnetism?

Atomic frequency of some elements allow electrons to escape and be replaced by PCP's. Replacement creates an electrical current in the element. Electrons exiting create (positive end) and are repelled until re-entering (negative). This recycling of electrons creates the magnetic field.

(+ exiting = North Pole); (- entering = South Pole)

The positive entity of our universe [Positively Charged Particles PCP'S In space and in mass]

Create the Jacobs Grid of intersecting Positively Charged Particles [PCP'S] this connection creates Particles [PCP'S] the force of Gravity

Living & Working inside a large energy bubble

Science /Man will never understand the beginning of Energy/Universe nor will Science /Man be able to understand or predict its ending.

Positively Charged Particles (PCP's)

The Entity that creates the electrical component in living matter

This is the smallest positive particle in the universe which is accelerated by nuclear fusion of our sun's. [sometimes called the god particle] They travel at 300,000 kilometers per second they connect with each other at every two times ten to the -18 per second

These particles are what science sometimes call antimatter or dark matter. Science knows there's something there but can't identify it.

Their connection in mass is recognized as the nucleus of our atom and creates a negative reaction, the reason we have a positive and negative world.

This connection is what creates life itself.

Why there is a electric component in all living mater.

All electromagnetic energy put on this grid is negatively repelled at 300,000 kilometers per second. Gravities force of attraction also rides on this negative grid.

The positive center of the impact area of one atom

Attracts the negative exterior of the opposing atoms

Gravity being in the center of each atom not only keeps atoms of the same frequency together but answers all questions in regards to mass attracting mass.

With energy on the outside of the atom, the atom is so connected to the universe that when it becomes in contact with the positively charged particles it tries to accelerate at 300,000 kilometers per second and mass can't handle this sudden start and it explodes. The more atoms involved in the accelerating at the same time, the larger the explosion.

121 E Willopa Rd. Shelton WA. 98584

Nature created 15 billion years ago from nothing in less than 4 minutes
and is still expanding **THIS IS THE POWER ONE HAS
WITH ENERGY IN THE CENTER OF THE ATOM.** S

Science has it backwards

With gravity on the outside it does not explain mass attraction to mass or why mass stay together at all.

Why or how would one atom attract or mix with another and make a molecule such as hydrogen and oxygen making water Can you imagine a bunch of neutrons floating around protecting the electron from the proton so the atom don't blow up

Science has it backwards

With energy on the inside where is the large Casing on the outside of the atom necessary to hold this energy within.

How is the energy of one atom sheared with the energy of another atom in the same element

With energy on the inside of a atom science created a universe from a 10 to the -23 cm atom. This atom is so small that it can't be seen with a electron microscope. it made our universe in less than 4 minutes.

Having gravity in the center of a black hole and the big bang theory creating something from nothing is a little ridiculous don't you think. Imagination is one thing, but shouldn't science have some verification before they teach such junk to the students of the world

Our Universe a Large Energy Bubble

The end of the positively charged particles grid, because there is no sun's creating nuclear fusion that causes their acceleration beyond this point. All light and energy is reflected back in the universe before this point

The solar systems that encircle the galaxy

The planets that encircle their suns

The inner core of our universe

PCPs Turning back to the negative exterior of the suns of our universe, creating the outer mirrored edge with no energy beyond this point

The end view
of our universe.

Henry
Jacobs

The Big Bang Theory

Nature starting something from nothing. What is the difference between this and God doing it with his brain?

Why wouldn't all energy dissipate into the vastness of nothingness, after the initial blast?

What energy would cause the suns to start their nuclear fusion or planets to orbit them, or even cause all planets and suns to be round?

Give me a break!!!!

Started as a 10 to the -23 cm atom.

At least 10 billion times smaller than the dot pictured

Made our Universe in less than 4 minutes

Now it takes at least 12 billion light years for light to travel across it.

The Final Theory: Rethinking Our Scientific Legacy

GRAVITY RE-EXAMINED . QUANTUM RETHINK . RELATIVITY DEMYSTIFIED . ENERGY EXPLAINED

Standard Theory

The single principle is my
Positively Charged Particles

Theory of Everything

Today's Standard Theory vs. the Simplifying and Unifying Theory Of Everything

The scientific world is so far out a context in this matter that it is unbelievable. I have only one quest left in my life, it is to make this public knowledge for laymen to understand in order to pressure the scientific world to look at it.

The following is the conclusive proof I am correct and so was Nicklaus Tesla.

The next time you use your cell phone in a room with four walls, ask yourself, is the energy from the battery forcing the frequency from the cellphone through these walls on all sides of you, or is this negative frequency simply attached to something that is constantly going through these walls? Which would be more acceptable.

Explaining Einstein $E = Mc^2$. How the speed of light is connected to energy in mass. Einstein created the equation then spent 30 years of his life trying to figure out what he created.

(Fact) Sciences detected the cesium 133 atom, the aluminum atom and the magnesium atom, pulsating at the same rate **9,192,631,770 cycles per second** (known as radioactive decay). (From now on rounded down to 9,192,600,000.)

The speed of light is **299,792,458 kilometers per second**. (From now on rounded up to 300,000 kilometers per second.)

The question is how far does light travel for each pulse of the atom?

9,192,600,000 divided into 150,000 kilometers per second. This is because, at all times **2 Positively Charged Particles** are traveling towards each other, making the connection at every 9,192,631,770 per sec. This connection creates the **nucleus of every atom** in our universe. {The distance between the particles is the **(diameter of the Scientist's average atom)**.

Every 150,000 connections equal 300,000 kilometers traveled. This means there are 9,192,450,000 connections leftover in one sec, after light has traveled 300,000 kilometers. This means my 2 positively charged particles, each traveling towards each other at half the speed of light, cover a combined distance of 61,283 units, smaller than any positive measurement by man. This connection creates the speed of light and forces all negative electromagnetic energy to travel at 300,000 kilometers per sec. This is the time it takes light to travel across our impact area or (across an average atom).

This beat was first detected in the cesium 133 atom. This atom operated our first atomic clocks. This is the ultimate proof that all energy is kinetic. It shows that the atom is not pulsating inside itself, but is actually beating to the connection of our positively charged particles producing **(the kinetic energy of the universe)**.

This is the ultimate proof that all energy is kinetic.

Reading this remember there is only one logical answer in regards to any physics question. A unified field theory must answer anything and everything about all forms of energy and connect everything and anything to something with one simple answer or connection.

Einstein

The 1920s would prove to be a period of mostly fruitless endeavor for Einstein. By the middle of that decade, he was increasingly absorbed in an effort to reconcile his new theory of gravity with Maxwell theory of electromagnetism to produce what was called a unified field theory. This would mean finding a common thread in the laws that govern the very largest bodies like stars and planets, and those that apply to the infinitesimal world of the atom.

It was this undertaking that would consume him for NEARLY 30 years and would come to nothing in his life (according to the scientific community).

As Einstein grew older the dauntless thinker, who had once challenged Newton, became much more reluctant to overturn the centuries old assumption of physics, this was truly objectionable in the new theory of quantum mechanics, brought forth by Werner Heisenberg.

Einstein called quantum mechanics a quirky action. Regardless this new science brought forth a universe operating, in a bizarre way, which produces black holes, wormhole, dark matter, antimatter, string theories, parallel universes, the fourth dimension and even leaving the possibility that God created the whole damn thing in the minds of many so-called scientists. On top of everything, eliminated the attraction of mass to mass as a force, in fact gravity is a non existing force (according to the scientific community).

Why would science be so willing to accept one idea of Einstein's and completely denounces another that he spent 30 years of his life working with?

This is why science cannot get their hands on my answers. It is because of what Einstein created in the early part of his life, but you want to remember that Einstein looked for the last 30 years of his life for my theory. (His above efforts nearly had him excommunicated from the so-called Scientific World.)

I think we should start with Einstein $E = Mc^2$. This is when he is talking about the Kinetic energy of our universe.

Einstein measures the kinetic energy of the universe with the speed of light. He merely states that this Kinetic energy is present in mass. He does not say how or why the kinetic energy of space operates an atom of mass.

Einstein's theory of space-time is also deeply flawed because it has no ability to explain the attraction factor of mass, and has eliminated gravity as a force. This idea eliminates any possibilities of creating a unified field theory that works.

This is one of the big differences with my theory. The impact of positively charged particles creates gravity by leaving a positive and negative entity in each atom or impact area, which not

only gives each atom its own force of gravity but also creates the actual spark of life and causes the kinetic energy of our universe. Gravity is the actual glue of the universe. Because each atom is attracted to each other.

This is my theory, positively charged particles connect at every 10 to the -8cm in mass and space, this connection of positively charged particles is the kinetic energy of the universe acting in every atom in the universe. Their impact or connection in mass is the area that creates the nucleus of science's atom. Our positive and negative world which is the spark of life itself is created by this same impact.

The kinetic energy of our universe, creates the force of gravity with its impact in mass, this makes gravity the actual glue of the universe and eliminates the big bang and expansion theory. Positively Charged Particles explain exactly how and what energy is in our universe. This impact is the entity that creates all life. It causes evolution to take place, in the manner it does. It creates the activity in every electrical connection within us. Cobalt bonding would not happen without the Jacobs Positively Charged Particles Grid. The hydrogen and oxygen atoms would have no mean to travel or express their frequency and connect and make water without this Grid.

Without gravity in the center of an atom, we would have no ozone layer. The respective elements of the universe would not be able to come back together and create new planets from the soup created after a supernova. The planets and suns would not even be able to become round without gravity in the center of an atom. What more proof is there for this is the only way the universe can exist and the energy in it can work.

I think we should start with what Einstein did, create $E = Mc^2$. This is when he is talking about the Kinetic energy of our universe. Einstein measures the kinetic energy of the universe with the speed of light. He merely says that this Kinetic energy is present in mass. He does not say how or why the kinetic energy of space operates an atom of mass.

Einstein's theory of space-time is also deeply flawed because it has no ability to explain the attraction factor of mass and has eliminated gravity as a force. This eliminates any possibilities of creating a unified field theory that works, because the force of gravity as well as our positive and negative world, which is the spark of life itself, is created by the same impact of positively charged particles. This is kinetic Energy at work in mass.

There is only one name that should be considered with energy, that is **Nickolas Tesla**.

Tesla's thought about Einstein is as follows: [a] magnificent mathematical garb which fascinates, dazzles and makes people blind to the underlying errors. His theory is like a beggar clothed in purple whom ignorant people take for a king... its exponents are brilliant men but they are metaphysicists rather than scientists....

I believe all energy we used today is the kinetic energy of our universe, how we recognized this energy is what sciences have wrong. I understood this before, (I was familiar with Tesla's works.)

By the year 1891, Nikola Tesla had invented many useful devices. It was during this year that Tesla made the following comments during a speech before the American Institute of Electrical Engineers: "Ere many generations pass, our machinery will be driven by a power obtainable at any point in the universe. This idea is not novel. [...] We find it in the delightful myth of Antheus, who derives power from the earth; we find it among the subtle speculations of one of your splendid mathematicians [...]. Throughout space there is energy. Is this energy static or kinetic! If static our hopes are in vain; if kinetic – and this we know it is, for certain – then it is a mere question of time when men will succeed in attaching their machinery to the very wheelwork of nature."

This description of the physical mechanisms of the universe was given before Tesla became familiar with the Vedic science of the eastern Nations of India, Tibet, and Nepal. This science was first popularized in the United States and the west during the three year visit of Swami Vivekananda.

I can only feel the pain that Tesla felt, when I realize how far we went in the wrong direction, because Einstein's and his scientific associates' inability to question Einstein's products with simple reasoning and logic. This is not fair to mankind. Mathematics should only be used for measuring results and not for creating a fabric that don't exist. This fabric is easily nullified with a simple logical and reasonable question, what some people would call old fashion common sense.

Tesla argued:

Tesla: "I hold that space cannot be curved, for the simple reason that it can have no properties. It might as well be said that God has properties. He has not, but only attributes and these are of our own making. Of properties we can only speak when dealing with matter filling the space. To say that in the presence of large bodies space becomes curved is equivalent to stating that something can act upon nothing. I, for one, refuse to subscribe to such a view."

I ask you this question did you realize that if our earth and the rest of the planets in our solar system was rolling on Einstein Fabric they Would roll in the opposite direction they do today?

I can only think the scientific community must want us to believe that physics as they know it, is something that is far beyond our capacity for logic and reason.

Einstein's fabric and his theory of relativity never did answer the following question. What force created the attraction between Newton's apple and the earth?

Newton: The principle that any two particles attract each other with a force that is proportional to the product of their masses and inversely proportional to the square of their separation. We use Newton's principles of attraction in our space travels or even the moon creating our tides.

There is another simple question that science does not address. How much drag does the moon put on the earth's rotation to create the tides? This should be computable in foot pounds of energy.

This creates another question for science. What powers the earth's rotation to counter the moon's drag? If Newton would have had the answer that I have in regards to identifying exactly what the force of gravity is, we would not have Black holes, no nuclear binding force or thinking we can travel at the speed of light in Einstein's space ship and get younger. In fact, there is a physics professor at the University of Washington working on a project and looking into the feasibility of traveling backwards in time, the proposition that would eliminate his very existence. He has received donations from private individuals for some of his research. Wouldn't this be nice, we could instantly renew our fossil fuels here on earth? This time not create the automobile, stay with the horse and buggy and save our fossil fuels. If we can alter time in any fashion, we can alter mass, so the next step would only be to create a younger earth.

The message I am trying to convey is that the degree that science is looking backwards is on anyone's imagination. We must find the ultimate free kinetic energy of space.

There are several things wrong with the idea that time is in some way being warped into the fabric of space-time.

Einstein got this idea because he did not understand how light travels. He always imagine himself riding on a light beam. You must understand the only thing that can instantaneously start in all directions at the speed of light is light itself. If mass does this you have an explosion, this is the kinetic energy of the universe at work. If Einstein got his wish I'm afraid him and his spaceship would simply make a big explosion because the only thing that can travel at the speed of light is electromagnetic energy and the light from his body being torn apart from the acceleration of his molecules going in all directions at the same time. This is what happens when mass of any kind steps on the Jacobs Positively Charged Particles Grid.

This is the deal if we can put mass onto the grid without the immediate acceleration, we have space travel. I have watch shows about wormholes, parallel universes, the string theory and it becomes very painful to watch these programs. I have to turn them off or I start cussin g a t my TV when they can throw logic and reason and any physics that we practice on this planet out the window. As soon as science can answer for me only one of several simple questions that we recognize on this planet each day, I would believe something they have to say.

Why do we have a positive and negative electrical entity and exactly what creates it?

How does Einstein's fabric create the attraction between mass? When I drop a stone to the ground we must use Newton's theory of gravity, the attraction of mass-to-mass to compute this force.

If our earth is rolling on Einstein's fabric, why is it turning in the wrong direction like all the rest of the planets and even the moon?

Why does all electromagnetic energy travel at three hundred kilometers per second?

Think about this one, how can all the electrons that we use in all of our houses and factories, restaurants and any other electrical apparatus someone may use, turn around and get back through the ground cable at a generator at some hydroelectric dam 1000 of miles away?

All the cars have generators in them, how do they get back there, how about an airplane traveling at 3000 miles an hour, how do they get back there?

What is the force of magnetism without any ground cables, and no powering earth device that will work any place in our universe?

What is powering all living things with an electrical system working within them? This includes the smallest of bacteria that you can only see with a microscope.

When science can answer any one of these questions, they will be able to answer all of them and they will have discovered My Positively Charged Particles doing their job. I do not think science even by accident will be able to discover free energy or create a spaceship that can travel at the speed of light because they have nothing but wormholes for brains.

I think the best way to start this is from the beginning according to the scientific community, this is the idea of a big bang from a 10 to the -23 cm atom, and this created our universe 15 billion years ago. This is ridiculous because there is no energy inside an atom, let alone enough to build a universe.

I believe that the universe has been recycling for hundreds of billions of years, but I do agree our earth is only 4.6 billion years old. If there were a beginning, it would have to be in the form of a bubble blown off another energy bubble by some multi supernova energy. Regardless we are the star stuff of our universe and operating on its kinetic energy, not only creating our existence on this planet but the power to evolve into the creatures we are today. It is obvious what this is and we will call it the spark of life. An electrical spark that all living matter is operating within each of us regardless of size or identity. This means we are not only stuff of our cosmos but we are still plug into its kinetic energy in order to keep us alive. Imagine looking into a microscope and seeing some bacteria jumping around this electrical component, it is the kinetic energy of our universe. If science cannot answer what powers this electrical energy in us, or what powers a regular earth magnet, they cannot have any idea what energy is. If science cannot answer these questions, how can science try to tell us what or when energy began. I have no idea why, when or how energy began, but I do understand exactly what it is and how it works. The nuclear fusion in our suns is constantly accelerating and forcing out positively charged particles faster than they come in, creating our energy bubble. These positively charged particles travel away from our suns as far as they can, but they are trying to return to another large negative entity, the exterior of another sun, so they must turn back.

Their turning back is what forms the outer end to our energy bubble and creates the mirrored inner surface of our universe. They are also always bumping into each other and slowing down to nearly half the speed of light, their constant speed.

The positively charged particles are approximately 10 to the minus 48 centimeters in diameter. They are 10 to the minus 8 cm apart, traveling toward each other at the 10 to the -9 per second, half the time it takes light to travel this distance. Closing the gap between each other at 10 to the 18 per second, this creates the speed of all electromagnetic energy (300,000 kilometers per second). They connect with each other in every 10 to the -9 per

second, forcing out the negative entity. This connection is recorded in the cesium 133 atom which beats at 9,192,631,770 cycles per second. In space this is the negative entity that all electromagnetic energy is repel on at 300,000 kilometers per second. In mass, this is what science calls the negative electron. In mass, this is the spark of life or the kinetic energy of our universe that creates life on this planet and powers each of us until we die. This connection of positively charged particles also creates the energy in magnets and is the factor that is reproducing the negative electrons in our field coils of our generators.

Science has no understanding of the kinetic energy of our universe, although they want to tell us when and how it began (ridiculous). I want to make one example of where the scientific community is at in understanding the kinetic energy of our universe.

They are like a bunch of Neanderthal hunters, 35,000 years ago one day when they were hunting mastodons. They come upon a large diesel engine operating an electrical generator, the engine is running, but only has enough fuel to run for a few days. They have no idea what this internal combustion engine is about, in spite of this, they understand what a great discovery they have. What they decided to do with their great discovery is the same as our scientific community has done with today's energy problem. The elders in their community, decided to set up camp near this noise machine even though there would not be a mastodon for miles because of this noise, and they would use the exhaust from the engine to cook their meat. They have no idea this is an electrical generator producing an electrical current or that it will run out of fuel in a few days. This is no different than what happens in our scientific community today, I can prove this.
